SIZES 16.5IN, 18IN  
COLOURS GREY

£399

## Genesis Alptitude

**GENESIS** [WWW.GENESISBIKES.CO.UK](http://WWW.GENESISBIKES.CO.UK)

This UK designed, Reynolds steel tubed technician is fully tooled-up to join the radical riding arms race. Reynolds 853 is one of the highest grade steels available. It hardens around the welds to increase strength where most steels weaken, creating a tough frame, reinforced by open-backed gussets, a ringed head tube and a top tube/seat tube bridge.

You also get ISCG, bottle and Crud Catcher mounts and the slim, tapered 'A-braced' stays are heavier gauge for increased strength.

The 66.5 degree head angle is designed for confidence on steep, fast descents and is lower and shorter than that of Genesis' Altitude frame to allow easier body movement. Its weight is good for XC, its enthusiastically sprung without being too whippy and it's well priced for a Reynolds frame.
